

AIRWAY MANAGEMENT – BEYOND BASIC ICU CONSULTANT UPDATE COURSE

Course Description

This full day course, an addition to the BEYOND BASIC series, is designed to give the ICU Consultant a structured approach to management of the upper airway.

This course is CICM endorsed in meeting the Specialist High-Level Requirement in Airway Management. It is endorsed by UK Difficult Airway Society and the CICO component is ANZCA endorsed.

Commonly reported airway events in ICU include difficult and failed intubation and tracheostomy related problems. Themes associated with airway disasters include failure to identify high risk airways and failure of advanced airway skills and rescue techniques.

The course includes pre-course reading (course manual provided), pre-course MCQs, e-learning and classroom lectures but the main focus will be hands-on expertise in rescue techniques and decision making in a crisis situation. Case studies will be used to illustrate situational awareness and decision making.

The Course will cover

- Airway Assessment
- Approaches to Difficult Airway
- Airway Emergencies
- Teamwork and leadership in Airway Crises
- Familiarity with Airway Equipment
- Bronchoscopic Intubation
- Management of CICO (can't intubate/can't oxygenate)
- Tracheostomy and Laryngectomy Emergencies
- Checklists and Failed Airway Algorithms
